

Announcing the release of Genesis Duo Firmware Version 1.5.0

Dated: 13th Jul 2026

Release Category: **Minor**

Thermon continues to focus on advancing the efficiency of Heat Trace Asset Management by making continuous improvements to the Controls & Monitoring solutions portfolio. As a part of Thermon's Digitization initiative and our commitment to providing a great experience to our customers, we release new features/fixes on our products on a regular basis.

This release is for the latest version of the Genesis Duo firmware which introduces support for configurable alarm relay behavior on the Duo devices.

Features

1. Alarm Relay Mode is now configurable to one of the following via HMI:
 - a. Energize to Alarm (ETA)
 - b. De-Energize to Alarm (DTA)

Note: Version 1.5 is not currently supported by the Egis Platform. If the Genesis Duo is deployed as part of a Genesis Network installation, please do **not** upgrade to this version. Continue using the currently supported firmware version until Egis Platform compatibility is announced.

Recommended Action

We strongly encourage all customers to upgrade to this latest release if devices are deployed as standalone units. Please coordinate with our **Field Services** or **Product Management** teams to facilitate your upgrade.

Need Help?

If you encounter any issues, please [report them here](#).

You can also access the software via [our download portal](#).

Thank you for your continued partnership. If you have any questions or concerns, please [contact us](#).
