

FastRack Electrical Service & Distribution Packages

Fastrax™ FastRack Electrical Service and Distribution Package consolidates and streamlines multiple key control components in a factory built system for any location or rail project. FastRack package has a uniform design and consistent engineering with properly sized electrical distribution equipment.

Each FastRack system is factory assembled and pre-wired providing quality, safety and faster and easier installation while reducing field labor.

This custom pre-designed rack provides properly sized and matched components, consistent equipment grounding, high quality copper conductors, and fuse protection engineered to minimize arc flash exposure.

Safety Features

- Arc flash protection
- Current limiting fusing
- Equipment grounding
- Consistent field height
- Easy access for operation and testing
