HSX®
Self-Regulating Heating Cable

Application: Hot Water Temperature Maintenance

HSX heating cables, the heart of Thermon’s WarmTrace™ system, are specifically designed to maintain hot water supply piping at desired nominal maintenance temperatures. With 14 AWG bus wires (larger than any other system available), HSX can reduce the number of circuits required to install an electric heat-traced system.

Easy to Design . . .

A WarmTrace system replaces the complex recirculation network of return pipes, circulating pumps and balancing valves. For each hot water supply line, simply match the hot water maintenance temperature with the corresponding color-coded cable and insulate per the design guide.

HSX self-regulating cable automatically maintains desired water temperatures. Changes in pipe diameters, flow rates and use patterns will not affect the design. Even variations in ambient or water temperature are compensated for as the cable adjusts its heat output along the entire length of a heat-traced pipe.

Easy to Install . . .

HSX heating cable is cut to length and installed directly on the supply piping under conventional thermal insulation with ordinary hand tools. Kits for power connection, end termination and splicing, plus other accessories, are designed for quick and easy installation. Increased circuit lengths with HSX mean less circuits to fabricate and fewer total circuits.

Economical to Operate and Maintain . . .

Because a WarmTrace system replaces recirculation, it also eliminates the costs of continuously operating pumps, deliberately overheating the water and maintaining the recirculation system. Potential water savings can also be realized since the heat tracing can be installed up to the point of use; i.e., no waiting for hot water.

Self-Regulating Heating Cable

Product Specifications

Characteristics . . .
1. 14 AWG Nickel-Plated Copper Bus Wire
2. Radiation Cross-Linked Polyolefin Heating Core
3. Radiation Cross-Linked Polyolefin Primary Dielectric Insulation
4. Aluminum Foil
5. 14 AWG (equivalent size) Tinned Copper Metallic Braid
6. Polyolefin Outer jacket

Ratings . . .
0.38” @ 5°F, 1.25” @ -60°F Minimum Bend Radius
30 mA Ground-Fault Protection Required
208 Vac Supply Voltage

Note . . .
1. The National Electrical Code and the Canadian Electrical Code require ground-fault protection of equipment for each branch circuit supplying electric heating equipment.
2. HSX can be operated at 240 or 277 Vac with design assistance from Thermon.

Certifications/Approvals . . .

Typical Installation . . .
A WarmTrace HSX 2100 hot water temperature maintenance system will typically include the following components:
1. HSX 2100 self-regulating heating cable.
2. PCA-COM circuit fabrication kit shown with optional Thermon supplied junction box.
3. PCS-COM in-line/T-splice kit (permits two or three cables to be spliced together).
4. ET-6 cable end termination. Each PCA-COM and PCS-COM includes one ET-6.
5. FT-1L fixing tape secures cable to pipe; use on 12” to 24” intervals.
6. CL “Electric Heat Tracing” label (peel-and-stick label attaches to insulation vapor barrier on 10’ intervals or as required by code or specification).
7. Fiberglass thermal insulation and vapor barrier (by others).

Components . . .
Thermon provides a full range of components for sealing and connecting these cables. Contact Thermon for full details.

Installation Instructions . . .
Detailed installation instructions (Form No. CPD1014) is available on request.
