Tools Required

1. Utility Knife
2. Pliers
3. Screwdriver
4. Allen Wrench

Warnings

- Due to the risk of electrical shock, arcing and fire caused by product damage or improper usage, installation or maintenance, a ground-fault protection device is required.
- Installation must comply with Thermon requirements and be installed in accordance with the NEC, CEC, or any other applicable national and local codes.
- Component approvals and performance ratings are based on the use of Thermon specified parts only.
- Keep ends of heating cable and kit components dry before and during installation.

Certifications/Approvals

- IP66 NEMA/Type 4X
- Ordinary & Hazardous Locations
- Listed Heat Tracing Cable System 137M
- Certifications vary by cable type. See product specification sheets for additional information.
1. Slide the metallic braid back from the end of the cable. Cut the cable 3” from the bus connection.

2. Cut and remove primary insulation jacket.

3. Cut and remove heating element and fiberglass overlay. Push any remaining heating element wire under the primary insulation jacket.

5. Stagger cut one of the bus wires.

6. Tape bus wires individually and then together. Continue taping to cover overjacket.

7. Apply a liberal amount of RTV sealant to cable and slide end cap onto the end of the cable.

8. Slide the metallic braid over the end cap. Twist the ends of the metallic braid together and crimp with the lug.
