PETK
Power and End Termination Kit

INSTALLATION PROCEDURES

- PETK-1D for BSX, RSX, VSX-HT
- PETK-2D for KSX, HTSX, USX
- PETK-3D for HPT, FP

Order separately to be used in conjunction with Thermon connection kits
PETK

Receiving, Storing and Handling
1. Inspect materials for damage incurred during shipping.
2. Report damages to the carrier for settlement.
3. Identify parts against the packing list to ensure the proper type and quantity has been received.
4. Store in a dry location.

PETK Power and End Termination Kits (per cable)
PETK-1D for BSX, RSX, VSX-HT
PETK-2D for KSX, HTSX, USX
PETK-3D for HPT, FP

Installation Precautions
• To minimize the potential for arcing and fire caused by product damage or improper installation use ground-fault protection. The National Electrical Code (NEC) and Canadian Electrical Code (CEC) require ground-fault protection of equipment for each branch circuit supplying electric heat tracing.
• Installation must comply with Thermon requirements and be installed in accordance with the NEC, CEC, or any other applicable national and local codes.
• Component approvals and performance ratings are based on the use of Thermon specified parts only.
• De-energize all power sources before opening enclosure.
• Keep ends of heating cable and kit components dry before and during installation.
• Individuals installing these products are responsible for complying with all applicable safety and health guidelines. Proper Personal Protective Equipment (PPE) should be utilized during installation. Contact Thermon if you have any additional questions.

Note:
1. These sets have been evaluated as components of Thermon’s Approved connection kits, such that the area use ratings depend on the rating of the connection kits.
**Step 1: Remove Heating Cable Overjacket and Separate Metallic Braid to Form Pigtail**

1a. Cut and remove heating cable overjacket.  
**Do not cut metallic braid.**

1b. Separate braid strands at edge of overjacket and pull cable through opening in braid.

1c. Twist braid into a pigtail. Trim ends of braid.

**Step 2: Matrix Removal for BSX, RSX, HTSX, KSX, USX, and VSX-HT Cables**

2a. Cut and remove primary insulation jacket (BSX and RSX cables only).

2b. Cut a 4 mm strip of conductive matrix between the conductors.  
**Do not cut bus wire strands.**

2c. Cut and remove the 4 mm matrix strip.
Step 2: Heating Element Removal for HPT and FP Cables

2a. Cut and remove primary insulation jacket.

NOTE: Bus connection must be no more than 50 mm (2”) from pipe as addressed in connection kit instructions.

2b. Cut and remove fiberglass overlay and heating element. Push any remaining heating element wire under the primary insulation jacket.

2c. Cut and remove pairing jacket.

Do not cut bus wire insulation.

Step 3: Install Power Boot on Heating Cables

3a. Apply RTV sealant to cable to cover distance of at least 3 mm and slide boot onto the end of the cable.

3b. Slide boot onto the end of the cable. Expose 13 mm (0.5”) of bus wire.
Step 4: End Termination for BSX, RSX, HTSX, KSX, USX, and VSX-HT

4a. Cut and remove heating cable overjacket.

4b. Trim away exposed braid from cable.

4c. Fill the end cap with RTV sealant and apply a circumferential bead to cable [minimum of 3 mm (0.12”) wide]. Slide end cap onto end of cable.

Step 4: End Termination for HPT and FP

4a. Trim the cable 75 mm (3”) from the bus connection.

4b. Cut and remove overjacket and trim away exposed braid from cable.

4c. Cut and remove primary insulation jacket.

4d. Cut and remove fiberglass overlay and heating element. Push any remaining heating element wire under the primary insulation jacket.

4e. Cut and remove pairing jacket. Stagger cut one of the bus wires.

4f. Tape bus wires individually and then together. Continue taping to cover overjacket. Fill the end cap with RTV sealant and apply a circumferential bead to cable [minimum of 3 mm (0.12”) wide]. Slide end cap onto end of cable.

Do not cut bus wire strands.
