

GENESIS EVO™

THERMON
World Leader
In Industrial
Process Heating

Product Description

Introducing Thermon's **Genesis Evo™** which upgrades the capabilities and features of the older TC1818a & TCM18 panels by replacing the legacy controllers with a retrofit sub-panel containing all the new Genesis components.

ADVANTAGES

- 1. Time & Effort** – Easy install with minimum effort and time.
- 2. Costs** – Saves cost for our customers related to labor, de-commissioning and installing new panels, operational impact, etc.
- 3. Utilize legacy infrastructure** – Utilizes existing panel infrastructure and wiring thereby reducing complexity in implementation.
- 4. Compatibility** – The solution can be used with TC1818a/TCM18 panels.
- 5. Circuit Management** – The configurations allow for control of up to 72 circuits depending on the customer's requirements.
- 6. UI** – Provides a user-friendly HMI interface to interact and configure the panel.
- 7. Genesis Network Compatibility** – Enables the older panels to become fully compatible to be a part of Genesis Network and be controlled remotely.

PRODUCT MODELS

The following configurations are available to choose from depending on your requirements.

Ordering Part #	Description
17134	Genesis Evo™ 36 circuit configuration
17135	Genesis Evo™ 72 circuit configuration
